

## What is a volcano?

Earth isn't just a big round ball. It consists of pressure. When the magma comes out of the volcano The magma cools down it turns into rock. Enormous puzzle pieces called plates fit together.

In the air gas comes down so people can't breath. Magma is hot rock very hot rock. The melted rock is called magma. Some types of lava flow have cool names Aa means pahoehoe means smooth comfy looking pillow lava forms only underwater. There final resting-place. Many centuries

Later, Pompeii was discovered once again buried under hardened ash. Digging down researchers found the lost city and its people at last. About 2.5 million tourists visit pompeii every year butt Pompeii is old and fragile
